

Delphi/.NET Developer

“At Gaston Medical, every working day, you make a significant impact. Together we prevent life-threatening situations, improve quality of life, and achieve efficiency and cost savings in healthcare.”

Gaston Medical develops highly advanced software for various organizations in the medical sector. Our core technology is Gaston, a self-designed and built ICT architecture for the development and implementation of medical decision support systems. These ICT-driven alerting and advisory systems assist healthcare providers in daily patient treatment and care, and in preventing erroneous decisions.

We believe healthcare can always be improved. That's why we innovate for a higher purpose: preventing errors in healthcare with medication monitoring in our DNA. Gaston strengthens the passion to make people healthy and keep them that way. By working with professionals from day one and continually delving into the information needs of our customers, we create the ideal software. We achieve this by integrating alerting systems into existing information systems in healthcare institutions, supporting practitioners to act in accordance with professional guidelines.

What are you going to do?

You are motivated and responsible for your 'own' software, which is deployed in hospitals throughout the Netherlands. You will work closely with a small team of developers/software architects in Eindhoven, Maastricht, and Hoorn. Additionally, you will engage with our customers in hospitals because we believe it is crucial to align optimally with our customers' information needs.

What can you offer us?

- You have a Bachelor's/Master's degree (Computer Science or similar technical discipline)
- Experience with Delphi and .NET
- Experience with mission-critical applications is important
- You program in a SOLID manner
- You work accurately and pay attention to detail
- You are committed to continuously improving your programming skills
- Experience with Git, JavaScript, HTML, and SQL is a plus

- Experience with UML modelling and software development methodologies, especially OO and/or CBD, is a plus
- Knowledge and preferably experience in applying Microsoft Server products (e.g., IIS, Windows Server, MS SQL Server)
- Good knowledge of XML, JSON, REST
- Relevant work experience in the field is an advantage but not a strict requirement
- Knowledge of - and experience with SCRUM or other Agile development methodologies
- Your language proficiency (Dutch and English) is good to excellent
- You have good communication skills and are socially adept

And what do we offer you?

We offer you an engaging position in an enthusiastic small team. There is plenty of room for personal development, with all the opportunities to further develop and grow. You will work in an informal, professional organization with a lot of autonomy and the option to work partially from home. This provides an excellent basis for a good work-life balance.

The compensation is market competitive, both in terms of salary and benefits, and is continuously tailored to your development.

Your personality

You are driven, creative, and meticulous, ideally recognizing yourself in the following keywords: innovative, professional, resilient, communicative, flexible, expert, and motivated. Additionally, you are a team player who is "never done learning."
